

The 8<sup>th</sup> edition of the BOOK-D, will take place in Bordeaux-Pessac on the 14<sup>th</sup> to 16<sup>th</sup> of May 2024.

Previous editions were dedicated to various aspects of molecular magnetism. In 2024, the focus will be on the **interaction between magnetism and light**. This topic is at the core of several research areas in optics, electronics or information manipulation, light being a stimulus and/or a probe. During this event, leading researchers in spin state switching, magnetochirality, nano- and femto-magnetism, luminescence and related fields, will share their expertise through presentations and extensive discussion sessions.

Young researchers, post-docs and PhD students are strongly encouraged to attend to engage with this leading scientists and to present their research during the poster sessions. **Around ten of them will be selected for flash presentations.**

We look forward to seeing you in Bordeaux!
